INTERNATIONAL SEARCH REPORT	International application No.		
	PCT/JP2004/018506		
Continuation of Box No.III of continuation	of first sheet(2)		

The matter common mutually or totally to claims 1 to 4, claims 5 to 7, claim 8, claim 9, claim 10, claims 11 to 12, claims 13 to 15, the part of claim 16 relating to a combination of sequences of individual SEQ ID NOS, the part of claim 17 relating to a combination of sequences of individual SEQ ID NOS, claim 19, claim 20, the part of claim 21 relating to a combination of sequences of individual SEQ ID NOS, the part of claim 23 relating to a combination of sequences of individual SEQ ID NOS, the part of claim 24 relating to a combination of sequences of individual SEQ ID NOS, the part of claim 26 relating to a combination of sequences of individual SEQ ID NOS, the part of claim 27 relating to a combination of sequences of individual SEQ ID NOS, the part of claim 29 relating to a combination of sequences of individual SEQ ID NOS and claim 32 resides in being an antibody capable of binding to a TPO receptor.

The antibody as used in the present application involves degraded antibodies including antibody fragments. As reported in documents 1 to 3, antibodies or antibody fragments capable of binding to a TPO receptor and those having agonistic activities among them are publicly known.

Therefore, being an antibody capable of binding to a TPO receptor cannot be considered as a special technical feature in the meaning within the second sentence of PCT Rule 13.2. Since there is no common matter seemingly being a special technical feature in the meaning within the second sentence of PCT Rule 13.2, no technical relationship in the meaning within PCT Rule 13 can be found out among these invention groups differing from each other.

Such being the case, the inventions according to claims 1 to 38 are considered not as a group of inventions so linked as to form a single general inventive concept but as invention groups having 62 inventions respectively relating to 62 different antibodies. Therefore, it is obvious that these claims do not comply with the requirement of unity of invention.
